## **DETAILED ACTION**

## Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/19/2008 has been entered.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1, 15, 18 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Voyer in view of Smolyar et al. (US 2003/0114179 A1).

Regarding claim 1, Voyer discloses assigning a first time slot to a particular WTRU (dynamically allocating transmission resources between a base station and a plurality of mobile terminals, wherein a first slot might have been already assigned; Voyer: Col. 3, lines 38 – 41); determining and allocating another slot based on a criterion made using a quantity characteristic of the propagation losses between the mobile

Application/Control Number: 10/718,387 Page 3

Art Unit: 2617

terminal and the base station wherein characteristic quantity is compared to a threshold (Voyer: Col. 4, lines 29 - 65).

However, Voyer as applied above does not specifically disclose determining a slot assignment rank for the particular WTRU by comparing a first combined score generated based on a sum of weighted signal interference and code usage associated with the particular WTRU to other combined scores associated with other respective WTRUs. In an analogous art, Smolyar discloses estimating channel parameters using a performance estimator (i.e., block error rate, bit error rate, symbol error rate, and other performance measures) and a channel estimator (i.e., the number of paths in the channel, the path strengths, mobile velocity, path fading rates, symbol energy variances, variances between symbols of different blocks, variance of total block energy and/or others) and allocating the most appropriate channel based on the estimates (Smolyar: Page 2, Paragraph 0014, lines 1 – 16; Paragraph 0016, line 1 through Paragraph 0017, line 17 and Paragraph 0023, lines 1-26), thus it would have been obvious to one of ordinary skill in the art that to know that measuring various channel characteristics and ranking them in order would allow the system to allocate to the user with the most desirable resource. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the technique of Smolyar to the system of Voyer in order to provide an efficient channel allocation technique that is capable of providing a relatively rapid response to changing channel conditions in the system.

Regarding claims 15, 18 and 21, the claims are interpreted and rejected for the same reason as set forth in claim 1.

Response to Arguments

4. Applicant's arguments with respect to claims 1, 15, 18 and 21 have been considered but

are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to UN CHO whose telephone number is (571)272-7919. The

examiner can normally be reached on  $M \sim F$  9:00AM to 5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, George Eng can be reached on (571) 272-7495. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
